DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sporck (US Patent No 3120206) in view of Isokawa et al. (US Patent No 5279688) and further in view of Walker (US Patent No 3699636).

Sporck discloses a method of manufacturing a hollow shaft with a flange at one end thereof (Figure 3) comprising: a first die (13) with a recess on an inside surface thereof (16, 21) and a mandrel (14) at a center position thereof; placing a second die (30) in cooperation with said first die (13) with a recess (31) on an inside surface thereof; inserting & clamping a steel pipe (11, 5) between the first & second dies; engaging said mandrel (14) into said steel pipe (5, 11); and pressing the steel pipe while performing a spinning treatment (32) on an outer peripheral surface of said pipe so as to reduce an outside diameter thereof and to integrally form a flange (Figures 1-5, & column). Although Sporck discloses the dies in a horizontal orientation (as opposed to the vertical orientation claimed), and the fixed die (13) containing the mandrel (14) (as opposed to the moveable die containing the mandrel as claimed); the dies of Sporck are fully capable of being configured as claimed and performing the claimed invention (see MPEP 2112). In other words, the apparatus of Sporck could be oriented about a vertical axis, wherein die (30)

Art Unit: 3726

of Sporck could be fixed, and die (13) be moved to clamp the pipe and carry out the method disclosed.

Sporck does not explicitly disclose the specific composition claimed, or a heat treatment process.

Isokawa discloses the specific composition of Carbon, Silicon, Manganese, Boron, Titanium, with the remaining composition being made of Iron (Abstract, lines 5-15). Forming a shaft of the disclosed composition is advantageous in that it provides a shaft with improved cutability (column 1, line 51).

Walker discloses a metal bonding process including a cutting process (column 1, line 69+) and further comprising a heat treatment process (column 4, lines 55+). The heat treatment process is advantageous in that it enables the joining of metal components having differing stiffness characteristics, or to soften the components to be joined.

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to form a shaft as disclosed by Sporck with the specific composition disclosed by Isokawa, and applying a heat treatment process as taught by Walker, in order to realize the advantage discussed above.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Application/Control Number: 10/601,270

Art Unit: 3726

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen J Kenny whose telephone number is 703-306-0359. The examiner can normally be reached on mon - fri 9am - 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter Vo can be reached on 703-308-1789. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
